

Cards for Review Activity  
(Day 6)

Use the teacher information provided in the attached file as an answer key.

Say or sing the mnemonic that helps us remember the planets in order from the sun.	Which planet has the most satellites (moons)?	How many natural satellites (moons) does Pluto have?
Which planet is largest?	Which planet is furthest from the sun most of the time?	How many natural satellites (moons) does Jupiter have?
Name the five outer planets.	Which planet is rotating the fastest?	Which planet is rotating at almost the same speed as Earth?

<p>Name two planets that have a stronger known gravitational pull than the Earth.</p>	<p>Name the four largest planets in order of their size starting with the largest.</p>	<p>Which two planets are very much alike? (They are close to the same size. Their temperature is very close. Their rotation period is very similar.)</p>
<p>Which planet takes longest to revolve around the sun?</p>	<p>Why doesn't the sun's gravity pull the planets onto the sun's surface?</p>	<p>Name one thing in our solar system that does not have any gravity.</p>
<p>Why don't the planets bump into each other?</p>	<p>What shape are the orbits that our planets travel on?</p>	<p>What holds our moon in its orbit?</p>
<p>Earth's moon only revolves around the Earth. Why?</p>	<p>Which is the coldest planet?</p>	<p>Which is the warmest planet?</p>

Name the four inner planets.	Which planet has the largest range in temperatures?	Which planet has a temperature very much like Neptune?
Mercury takes 58.65 Earth days to rotate around the sun. How many Earth hours does it take? (Calculators may be used.)	Pluto takes 6.39 Earth days to rotate around the sun. How many Earth hours does it take? (Calculators may be used.)	Name the four planets that we know have no rings.
Which planet has the most rings?	Name the four planets that we know have rings.	Which planet has the strongest gravitational pull?
What is an orbit?	What unit of measure is used when measuring gravitational pull?	On which planet would you weigh the least in Earth pounds?

On which planet would you weigh the most in Earth pounds?	On which planet would you be oldest in Earth years?	On which planet would you be the youngest in Earth years?
Which is the only planet not named for a Greek or Roman god?	Which is the only planet named for a goddess?	Name the two planets that have the most oxygen.
Name the four planets made mostly of rock and metal.	Name the four planets made mostly of gasses.	What does AU stand for?
Why is Pluto sometimes closer to the sun than Neptune?	One AU equals how many miles?	Which two planets are closest together?
