

## Incredible Edible Rocks Recipes

Cereal Balls (igneous rock): Melt 1/3 C. margarine with a 10 ounce package of marshmallows. Stir in 6 1/2 cups of crispy rice cereal. Form this mixture into balls and cool on waxed paper.

Layer Bars (sedimentary rock): Preheat oven to 350 degrees F. In a 13" x 9" pan, melt 1/2 C. margarine. Sprinkle 1 1/2 cups graham-cracker crumbs over the margarine. Pour one can sweetened condensed milk evenly over the crumbs. Top with 1 C. chocolate chips, 1 1/3 cups coconut, and 1 C. chopped nuts. Press down firmly. Bake for 25 to 30 minutes. Cut the cooled treat into bars.

Almond Bark (metamorphic rock): Place 12 ounces of white almond bark and 12 ounces of chocolate chips in separate bowls. Melt each in a microwave for two to three minutes, stopping midway to stir. Pour the melted almond bark into the melted chocolate. Stir lightly to swirl, not mix. Pour the swirled mixture into a pan lined with waxed paper; then refrigerate till hardened. Break the treat into pieces to share with the class.
