

Cell Vocabulary

1. cell wall – gives the plant cell support and shape
2. cell membrane – controls the flow of materials in and out of the cell
3. mitochondrion – a rod-like structure that helps supply energy to other parts of the cell
4. vacuole – a fluid-filled sac that stores different materials
5. nucleus – controls cell activities and is surrounded by a protective tissue that separates it from the rest of the cell
6. chloroplast – contains chlorophyll and is used by a plant to make food
7. cytoplasm – a jelly-like material that surrounds the nucleus
8. Endoplasmic reticulum – a network of thin tissue that runs throughout the cytoplasm. It helps move materials to all cell parts.
9. Ribosome – a small, ball-like particle in the cytoplasm. It builds proteins needed by the cell

Scoring Rubric – Compare and Contrast

_____ Writing contains four complete paragraphs following correct format and is on the topic.

_____ Provides a clear introduction outlining points to be covered.

_____ Provides a paragraph discussing differences between two things being contrasted.

_____ Provides a paragraph discussing similarities in the two things being compared.

_____ Provides a conclusion which ties up all loose ends and reiterates all main points covered in body.

_____ Minimal mechanical errors.

6 checks = A
4-5 checks = B
3 checks = C
2 checks = D
1 check = F
